What Is the Spying Challenge?

The Spying Challenge is an OSINT, social engineering and physical security competition founded in 2016 by three friends: Mélik Lemariey, Sylvain Hajri and Christophe Baland. This competition involves a number of teams of three or four people in a context created from scratch for the needs of the mission.

It is structured around three phases: OSINT, tracking and physical intrusion. Several challenges are offered to competitors, who compete against each other in order to be selected for the next stage. At the end of each phase, participants send a detailed report of the information collected and the actions taken. The organizers then use these reports to define a team ranking.

I. Introduction

In accordance with Mission Order No. 502-NXH-857, the headquarters of the organization "Société d'Investigations Spécialisées" recruited 33 teams composed of elite agents to investigate a suspicious cryptocurrency fundraising campaign.

Indeed, some of the investors who participated in this fundraising event expressed doubts about the legitimacy of SupremIoT's objectives and asked to obtain as much information as possible about this company and its employees.

Your central office therefore provides you with part of the archives concerning this case (the rest being classified content). However, you will find excellent reports from the other teams that clarify some points.

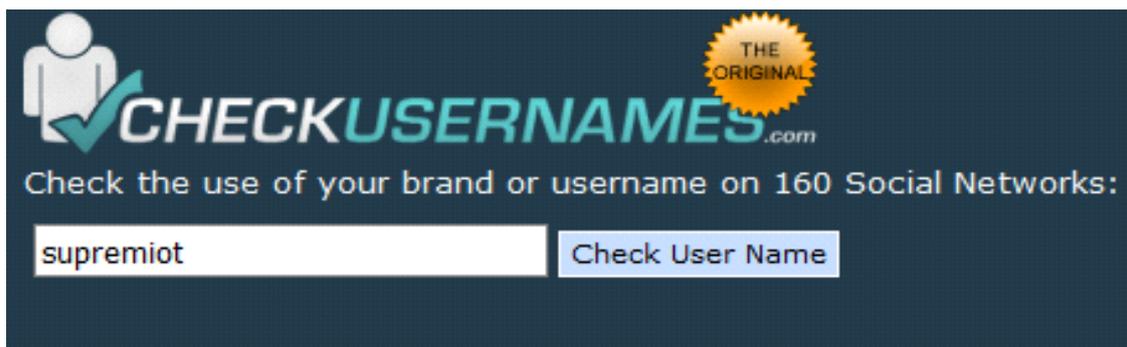

Of course, this VERY CONFIDENTIAL classified file is stamped - double stamped and tries to respect the technical terms of the sovereign vocabulary.

For greater realism and to respect everyone's confidentiality during the surveillance phases, the staff refrained from taking photos and allowed themselves to recover some of them in the team's reports in order to best illustrate the tests.

II. The company

1. SupremIoT's presence on the world wide web

SupremIoT seems to be an organization that is present on several fronts. Indeed, using the checkusernames.com tool as well as search engines, and although some false positives come out, it appears that the organization is on Facebook, Twitter, LinkedIn, Vimeo, Github and Telegram.

 You Tube Available	 Live Leak Available
 Wikipedia Available	 Zimbio Available
 Linked In Not Available	 Houzz Not Available
 Twitter Not Available	 My Space Available

 Tumblr Available	 Cracked Available

A. The Website

The organization has a [website](#) of high graphic visuals, and looks very recent.

It should be noted that the organization registered the domain name on 30/01/2018 with the OVH hosting service.

By browsing the site, our agents directly locate an organization chart that allows them to put several names and faces running the organization.

✉️ contact@supremiot.fr

Suivez-nous :

SupremIoT© 2018. Tous droits réservés.

By means of a simple search, it appears that SupremIoT's premises are located in a business center located in Gibraltar (a geographical location known to be favorable to certain organizations working in the world of the blockchain).

Bureaux à louer à Gibraltar WTC

6 Bayside Road, Gibraltar, GX11 1AA

Gibraltar WTC is located in a new and impressive building in the harbour of the city and in the proximity of a residential area. This center has a wide range of options for the customer and a wide selection of meeting rooms, training facilities and a large amount of communal space. Gibraltar is a strategic place because it provides an extensive selection of products and services that meet the requirements of local and international investors. The centre is just 5 minutes from Gibraltar Airport and 10 minutes from La Linea de la Concepcion. The centre is also accessible by going on foot and moreover in a short drive from the city center with its shops, bars and restaurants.

DISPONIBILITÉS

OBTENIR UN DEVIS

Accueil > Espace de bureaux > Gibraltar > Gibraltar WTC

With some additional research, it is easy to retrieve the reception number of the business center, contact them, and realize that no company named SupremIoT is located within these premises.

B. Video presentation

A video presenting the project is posted on the website, hosted by Vimeo and posted on May 23, 2018.

À propos de

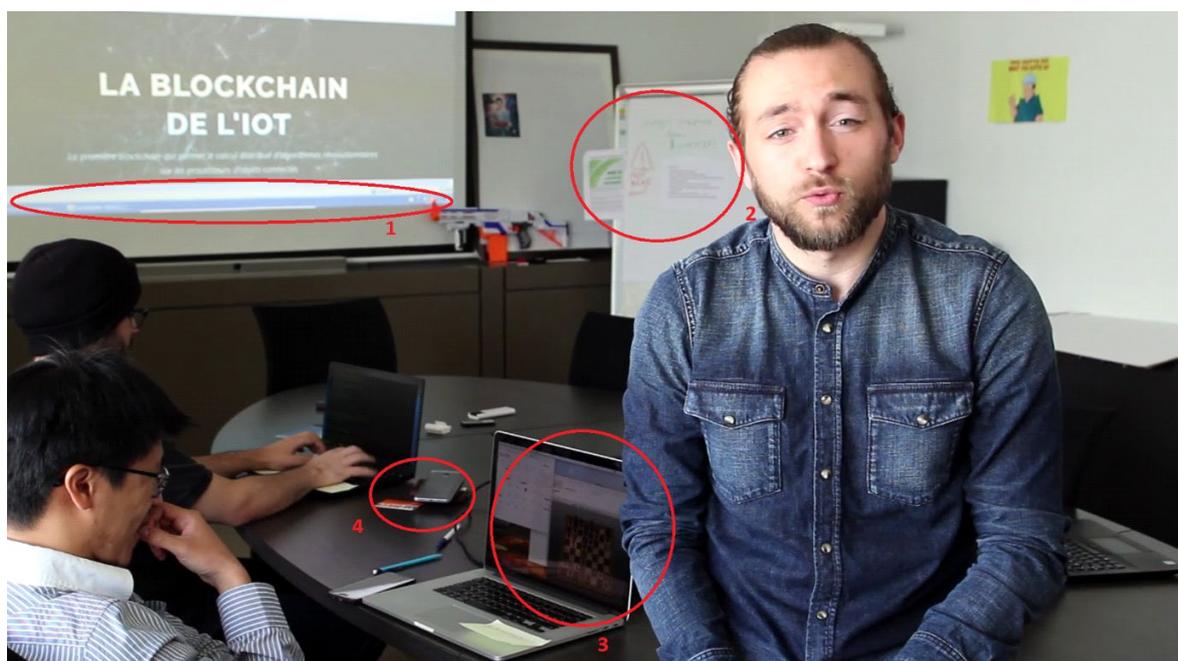

Titre	SupremIoT - Présentation de la blockchain quantique révolutionnaire
Uploader	SupremIoT
Mis en ligne	mercredi 23 mai 2018 16:37 EST via Parallel Uploader
Étiquettes	#SupremIoT, #blockchain, #quantique, #quantum, #iot, #smart, #big data, #cloud, #revolution, #bitcoin, #ethereum, #btc, #eth, #shitcoins,

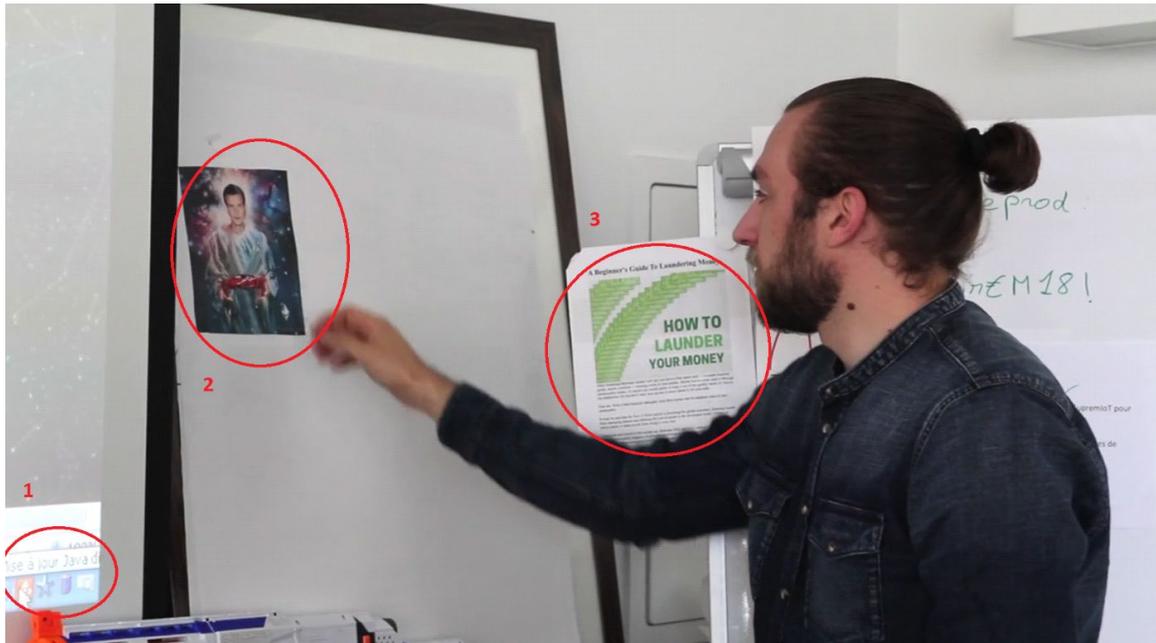

In addition to telling us the publication date, and that the team behind the project is very familiar with community management on New Information and Communication Technologies, we can notice that the word "#shitcoins" was used.

This term is regularly used in the cryptoactive community to describe a project with dubious technology and durability, but allowing a high rate of return in the event of an investment. Suspicious.

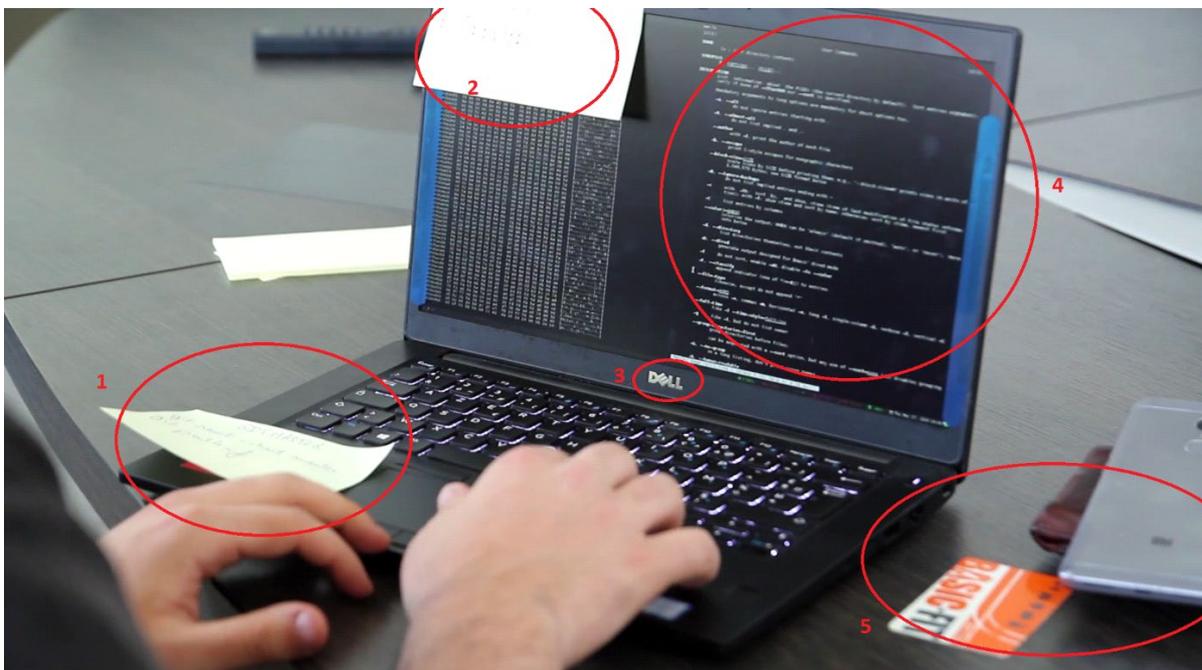

The content of the video tells us a lot about both the employees and the technical environment:

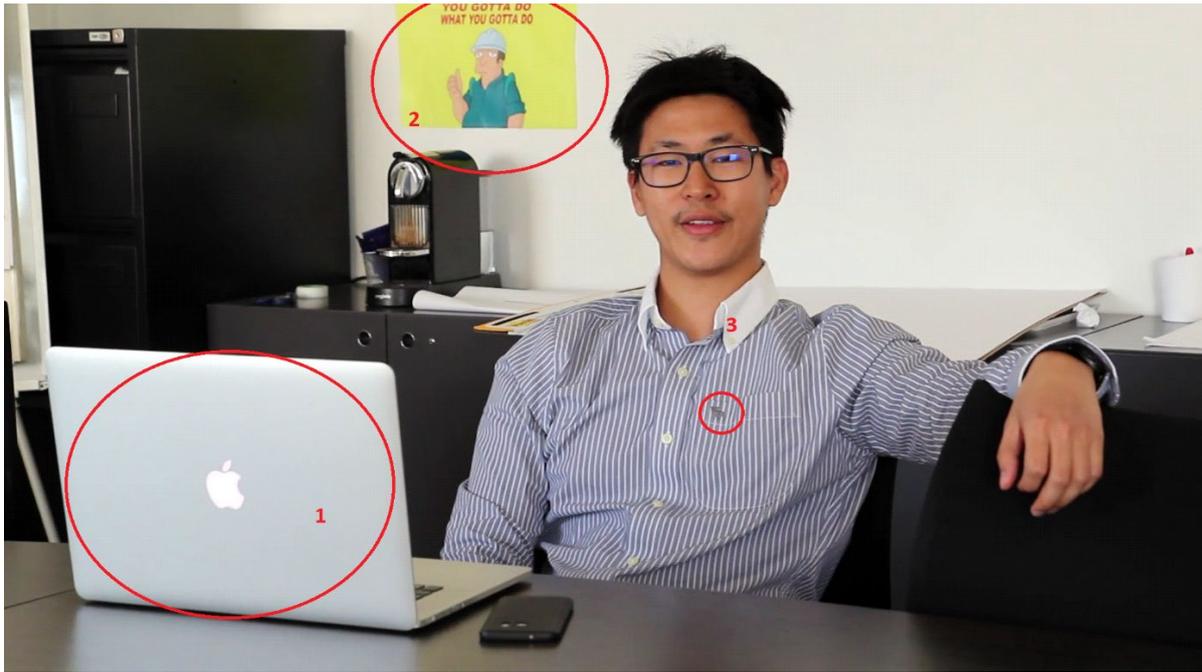

1. *The PC OS used to project video looks like a Windows XP*
2. *The table contains numerous information*
3. *Ian seems to be focused as much as possible on his work, but especially on his chess game and his empty agenda, on his Macintosh...*
4. *Umberto in the middle of his work seems to have left interesting information on the means of telecommunication he owns as well as on his sports activities*

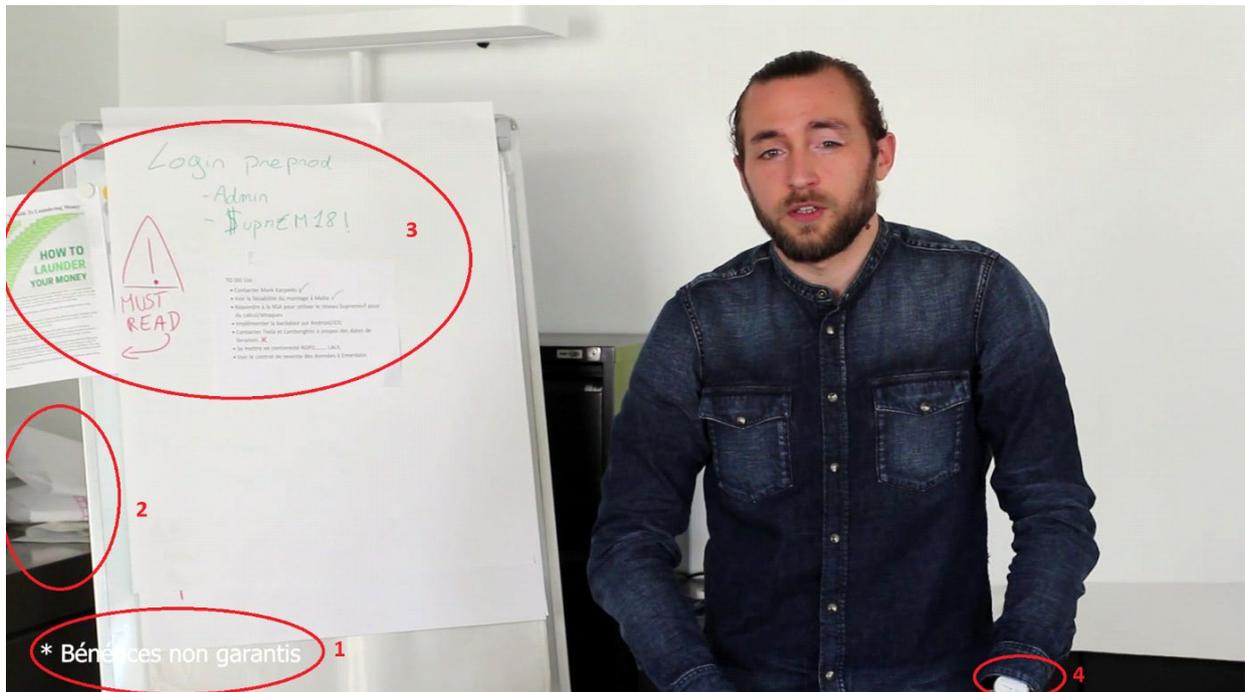

1. The presentation pc seems to be waiting for a Java update to be installed
2. Advei is in admiration before Vitalik Buterin (Founder of Ethereum), from whose hands a Lamborghini miraculously emanates. We can deduce his aspiration for profit.
3. The SupremIoT team seems not to want to participate in the tax effort requested by our good government

4. Agents with a 4K monitor or bionic eyes may see a git command memo appear
5. <https://bit.ly/SSrJ6j>
6. Umberto uses a Dell PC. This information can be useful in order to carry out vishing
7. The developer seems to use the "man ls" command. What can be deduced from this?
8. The target has a Basic Fit gym membership card and a phone with a logo similar to that of Xiaomi

1. Ian owns a Macintosh
2. The premises are decorated with slogans that do not show an exceptional professional enthusiasm, from the Futurama series
3. Ian seems to like "sapologie"

1. Non-guaranteed profits may be a cause for concern for some investors
2. Drafts are available in the premises. Some sensitive information can be found there and retrieved by our agents if a physical intrusion action into the target's premises is planned.
3. Connection information for a pre-production platform and a list of actions to do:
 - a. "Contact Mark Karpeles" (former head of a cryptocurrency trading platform that experienced a sudden disappearance of clients' assets). This task is indicated as

2018 Spying Challenge's Write-up - www.spyingchallenge.com

completed, one can imagine that SupremIoT wants to disappear with the finances of their investors

- b. "See the feasibility of assembly in Malta". This task indicates that SupremIoT is probably seeking to implement a continuous improvement of its tax evasion mechanisms
 - c. "Respond to the NSA to use the SupremIoT network for computation/attacks"
 - d. "Implementing backdoor on Android/iOS"
 - e. "Contact Tesla and Lamborghini about delivery dates"
 - f. "Getting into GDPR compliance..... LEWL"
 - g. "See the contract for reselling the data to Emerdata"
4. We can assume that Advei is wearing a watch that looks like a Daniel Wellington. May be useful for a phishing/vishing attack.

C. Smart contract

Agent Martin gives us the address of the SmartContract (https://fr.wikipedia.org/wiki/Contrat_intelligent) used for the SupremIoT ICO, which manages the SHIOT token :

<https://ropsten.etherscan.io/address/0x3e33c9a96b39a1484bff0de0a9cceb4e6e8a7426>

As a guarantee of transparency, the authors of the contract published its code.

The following member variables are declared:

```
13 contract SupremIOTToken {
14     string public constant _name = "Suprem IOT Token";
15     string public constant _symbol = "SHIOT";
16     uint256 public constant _totalSupply = 2000000 * 10**uint(_decimals); // WOW, 2,000,000 tokens !
17     uint8 public constant _decimals = 18; // OMFG that's 2,000,000.000000000000000000000000 tokens now !
18
19     address public owner; // that's us
20     address public trustedThirdParty; // that's not us
21     uint public deposited; // the real money
22     mapping (address => uint) public balances; // the SHIOT balances
23     uint256 public availableSupply = 2000000 * 10**uint(_decimals); // SHIOTs that still hasn't been sold
24     uint public tokenRate = 100000; // SHIOT rate
25     uint[] public quanticBlockchainBigData; // the quantic blockchain big data
```

The main constants of the contract are therefore:

- Name of the token (_name): Suprem IOT Token
- Symbol of the token (_symbol): SHIOT
- Total token supply (_totalSupply): 2 millions
- Number of decimals (_decimals): 18

The following variables are initialized when the contract is created:

- Contract owner (owner): 0xaEC197365EFAdfc671A3eca279b9cdFeb5B67DA5

- Trusted third parties (trustedThirdParty): 0x3288d807dB0642Ac177F762fdaAD4b3dbeFdfc97

The methods set out in the contract are as follows:

<i>function SupremIoTToken(address _trustedThirdParty) public</i>
<i>function name() public pure returns (string)</i>
<i>function symbol() public pure returns (string)</i>
<i>function totalSupply() public pure returns (uint256)</i>
<i>function decimals() public pure returns (uint8)</i>
<i>function deposit() public payable</i>
<i>function balanceOf(address tokenOwner) public view returns (uint balance)</i>
<i>function transfer(address _to, uint _value) public</i>
<i>function withdraw(uint amount) public onlyTrustedThirdParty</i>
<i>function entangleQuanticCloudIOTData(uint IOTData) public</i>
<i>function detangleQuanticCloudIOTData() public</i>
<i>function modifyQuanticCloudIOTData(uint index, uint IOTData) public</i>
<i>function killItWithFire() public onlyTrustedThirdParty</i>

Nothing unusual here, for a token according to the ERC20 standard.

The functions entangleQuanticCloudIOTData, detangleQuanticCloudIOTData, modifyQuanticCloudIOTData and killItWithFire are specific to SupremIoT.

Let's analyze what happened since the contract was created.

First of all, we note that several addresses participated in the ICO, each having "invested" 1 ETH:

- 0xf47184c95B9Cceae20aaE37C489C1694DBBD58C9
- 0x333C2358bDF6b7d5C9a78aB902E52353f31F9bdd
- 0x39699800d5635499f34B22c893177B1fA35D47bF
- 0x72920E21A6ba67aF6200323d05BAcC0406dD6d05
- 0xb56e6e05BfC831bB99FE66bec0A3d7008EEC984E
- 0x6d86B93E3a9dCCF90A28961dD617428509372C15
- 0xf4C857Ed0CA27e4B829CBa92a3Dd1Bb2450bbfea
- 0xd09c5CA4885203d74a81251Aa279f38D1903dF41
- 0xFe9DeaB67bAd15Dd084faA8df8ab29bc48dB68dD
- 0xd75e16A25bFeA144363C766a9CC88A710E994d43
- 0xd5c9C8c36ae9De6Da646C4587E6a861232d184b6
- 0xF50Cd7F400d3698040DC07e1CdD4a057a32386e6
- 0xdB07D516B79361AA38b8b95b09C880709C000095
- 0xf793E5C5ba8787feBcC1c5CddCCF2c0aAE786f19
- 0xfdC24fAa8eBC4FD402C5a9d095F311E6330c01B
- 0x6Af075883cE81a10914A80b6c2DEE189E96a98a9

- 0x01Ce252c4d64bf2c2BB679115169BBF8faF58A77

Then, three suspicious transactions were carried out by address 0xe3291e1ed1ed38a6c05dfb48bc974aaf0004dd67974 (referred as Haxor), which led to the disappearance of the Ethers owned by the contract.

How is this possible? According to the code, only the trusted third party was able to remove the Ethers.

Let us look in detail at what happened in these transactions.

The last transaction performed by Haxor is a call to the `withdraw()` function:

<https://ropsten.etherscan.io/tx/0x1ea257bf0e45b08c8a36f3d0edf358c713082f67f83e1de11d153c5bbf4589ec>

Although the author is not the trusted third party, the transaction was successful and the 17 Ethers owned by the contract were transferred to Haxor's address.

The `onlyTrustedParty` modifier is applied to the `withdraw()` function whose code below should have prevented this transaction from working:

```
40 // Very trusted
41 modifier onlyTrustedThirdParty {
42     require(msg.sender == trustedThirdParty); // trusted third party is very trusted
43     _;
44 }
```

We deduce that at the time of the call, `trustedThirdParty` had the value of Haxor's address or this transaction would have failed.

Let us look in detail at the other two transactions carried out by Haxor in order to understand how this could have happened.

The first transaction

(<https://ropsten.etherscan.io/tx/0x8c373c0951889f370dc9560a02b6e7f5aa25d77b7af1a5f7a695b0c5a05a9813>) is a simple call to `detangleQuanticCloudIOTData()` which does not have any parameters.

At first glance, there is nothing prodigious about wanting to un-introduce data particles from the Internet of things into the quantum cloud:

```
97 // Detangle quantic cloud IOT data from quantic blockchain big-data
98 function detangleQuanticCloudIOTData() public {
99     require(quantumBlockchainBigData.length >= 0);
100     quantumBlockchainBigData.length--;
101 }
```

The `quantumBlockchainBigData[]` array being empty, its initial size is therefore naturally 0.

The trustedThirdParty variable is the 2nd variable, so located in slot 1.

```
>>> hex(2**256 - 0xf65222313e28459528d920b65115c16c04f3efc82aaedc97be59f3f377c0d3f +  
1)  
'0x9addddceec1d7ba6ad726df49aea3e93fb0c1037d551236841a60c0c883f2c2'
```

Here we find the location of the trustedThirdParty variable in relation to the quantum arrayBlockchainBigData.

We see later that another agent (0xAd3692c2Ba9bDECfdcc663FBdb7a942427D71dBB) interacted with the contract and successfully exploited it to "commit suicide" in the next transaction with the killItWithFire() call:

<https://ropsten.etherscan.io/tx/0x81559bc0caaf2a9a88b02fc47ebbaa4898c617a4b2a8b8ac68fe5801f9fed8e8>

The Ethers, on the other hand, are lost.

This vulnerability was exposed by Doug Hoyte in his submission to the Underhanded Solidity Coding Contest and won 4th place with honourable mention:

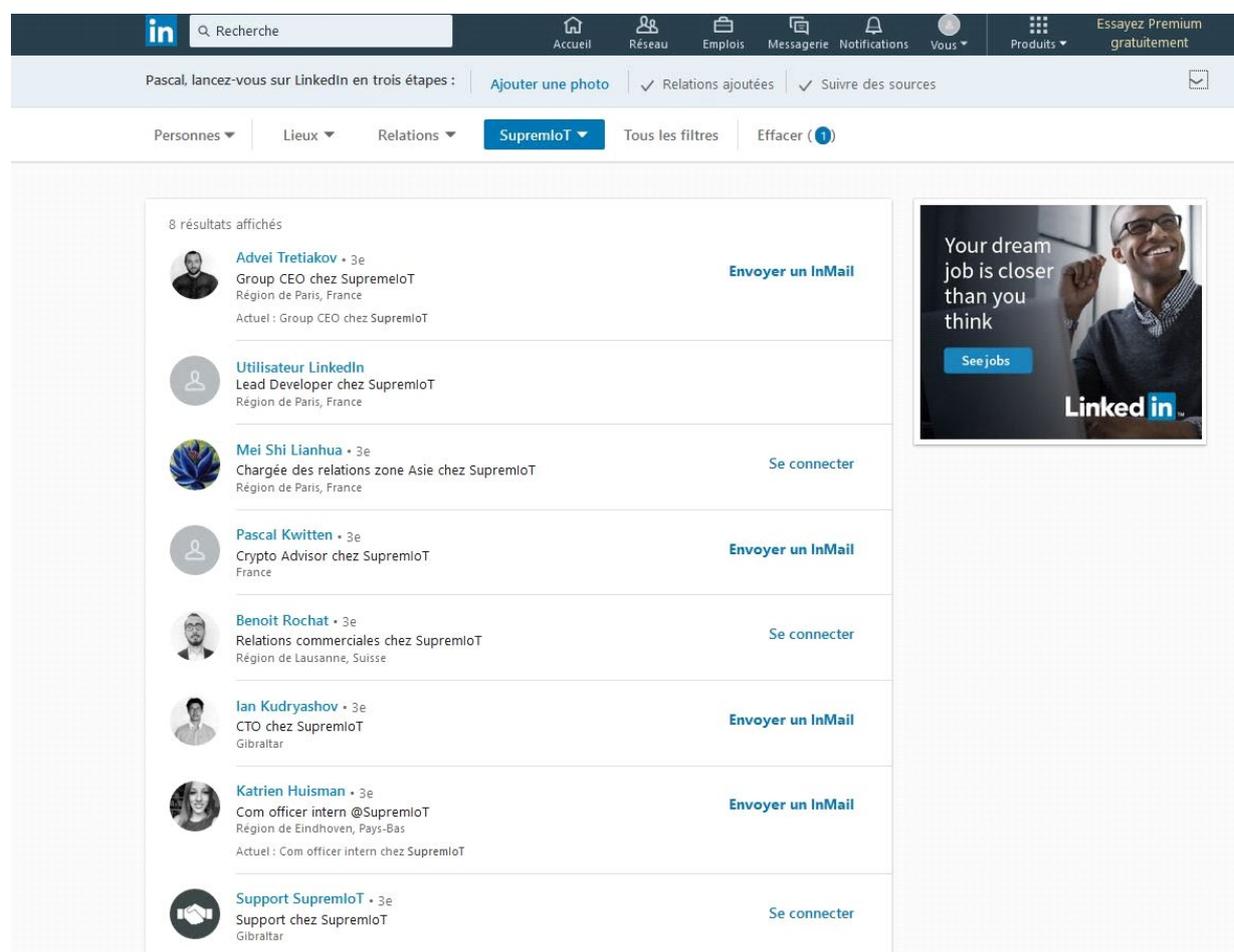

<https://medium.com/@weka/announcing-the-winners-of-the-first-underhanded-solidity-coding-contest-282563a87079>

We strongly recommend that you consult all the submissions for this competition, which are also very interesting and are available on the following deposit:

<https://github.com/Arachnid/uscc/>

III. Employees

Although the site gives us the names and functions of 4 collaborators, a search on the LinkedIn professional social network shows us other collaborators are working at SupremIoT.

Pascal Kwitten, a SupremIoT employee, does not normally have a LinkedIn account! The central may have noticed that a team created this fake profile in order to confuse some competitors.

Of course, the professional profiles of employees are interesting, but personal profiles (Twitter, Facebook...) are even more so to get to know our targets.

It is relatively easy to find a list of contributors by looking, for example, at SupremIoT's Twitter subscribers or by checking who liked the publications on the company's page.

3

1. Advei TRETIAKOV

The big boss of SupremIoT seems very little active on LinkedIn, where we do not learn much from him except for his last training at the Pierre and Marie Curie University and the fact that he follows the activities of the Franco-Russian Chamber of Commerce and Industry.

On the other hand, if the agents had connected with this person, they could have retrieved his email address and telephone number.

advei.tretiakov@mail.ru

He revealed a little more on Twitter by answering colleagues about the little pleasures of life:

On the other hand, it is on Facebook that the scoundrel really reveals himself.

Although he uses a pseudonym, we notice that he likes a publication about SupremIoT. We immediately recognize his face!

Thinking he can't be found with his pseudonym, the rascal allows himself to look for easy women who accept cryptocurrencies and don't hesitate to leave his professional email visible.

His pronounced taste for women can easily be seen on his profile, particularly by the fact that a large proportion of his friends are of the same sex, or that the videos and pages he likes raise doubts about the seriousness of his involvement in the sacred bonds of marriage.

1 commentaire

Nevertheless, Advei remains a person close to his Russian homeland and seems to have significant financial resources.

This excerpt from the pages Advei likes allows us to guess his bank as well as the club where he practices some of his sports activities.

It is also possible to approach him according to his musical tastes or during events in which he has indicated that he has participated.

This information can once again be used for vishing, spear-phishing or to set up quality spying.

Finally, the cover photo behind the wheel of a car reveals his taste for the MG MGB Tourer 1.8 Cabriolet 96hp.

2. Ian KUDRYASHOV

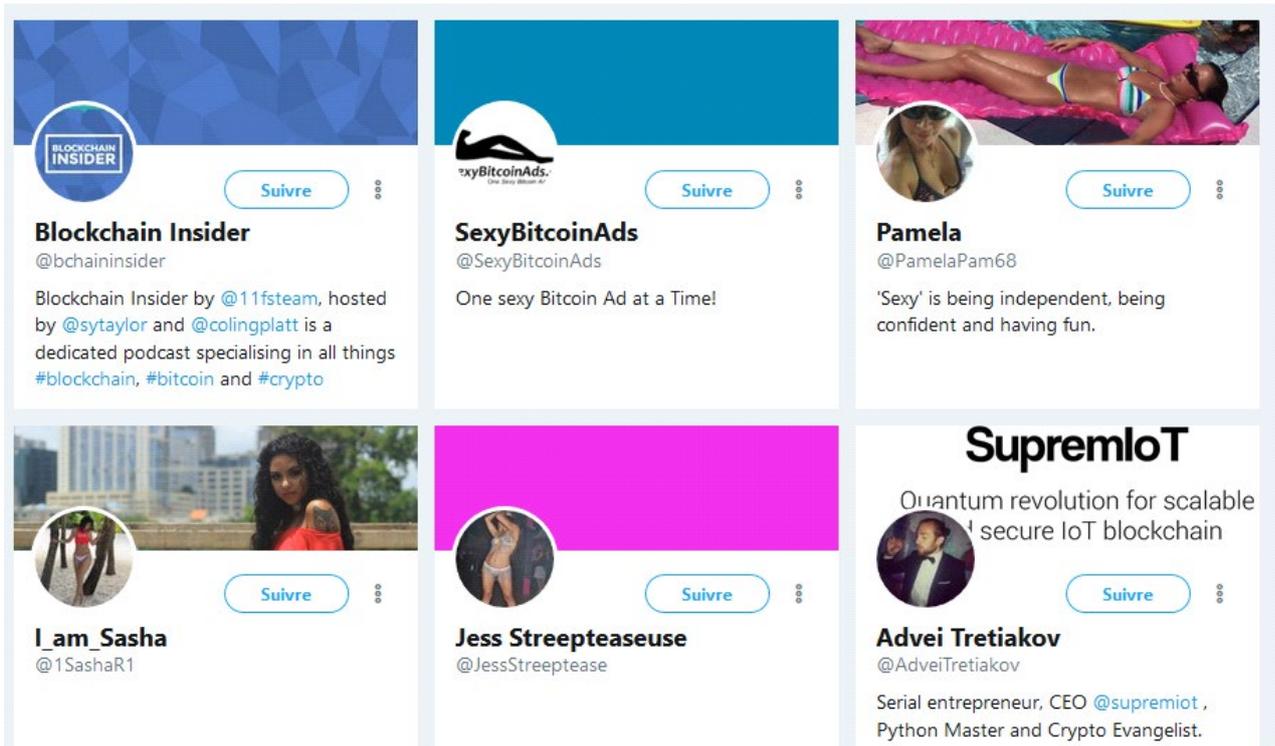

Ian seems to be a person who cares about his image as we noticed in the company's presentation video. Indeed, he is one of the few to follow "sapologie" and wear a shirt made of real fabric.

His LinkedIn profile doesn't tell us much, apart from his email address and previous experience at IBM in Russia.

On the other hand, it is possible to find your Twitter account under a pseudonym by looking at the followers of the SupremIoT account.

Now we discover Ian, or rather "@I4nKu". His last tweet is very promising, as is the typology of profiles he follows.

Ian is also used to sharing his adventures, his travels...

i4n-ku @I4nKu · 17 juin
Drinking some beer with my bitcoins :D

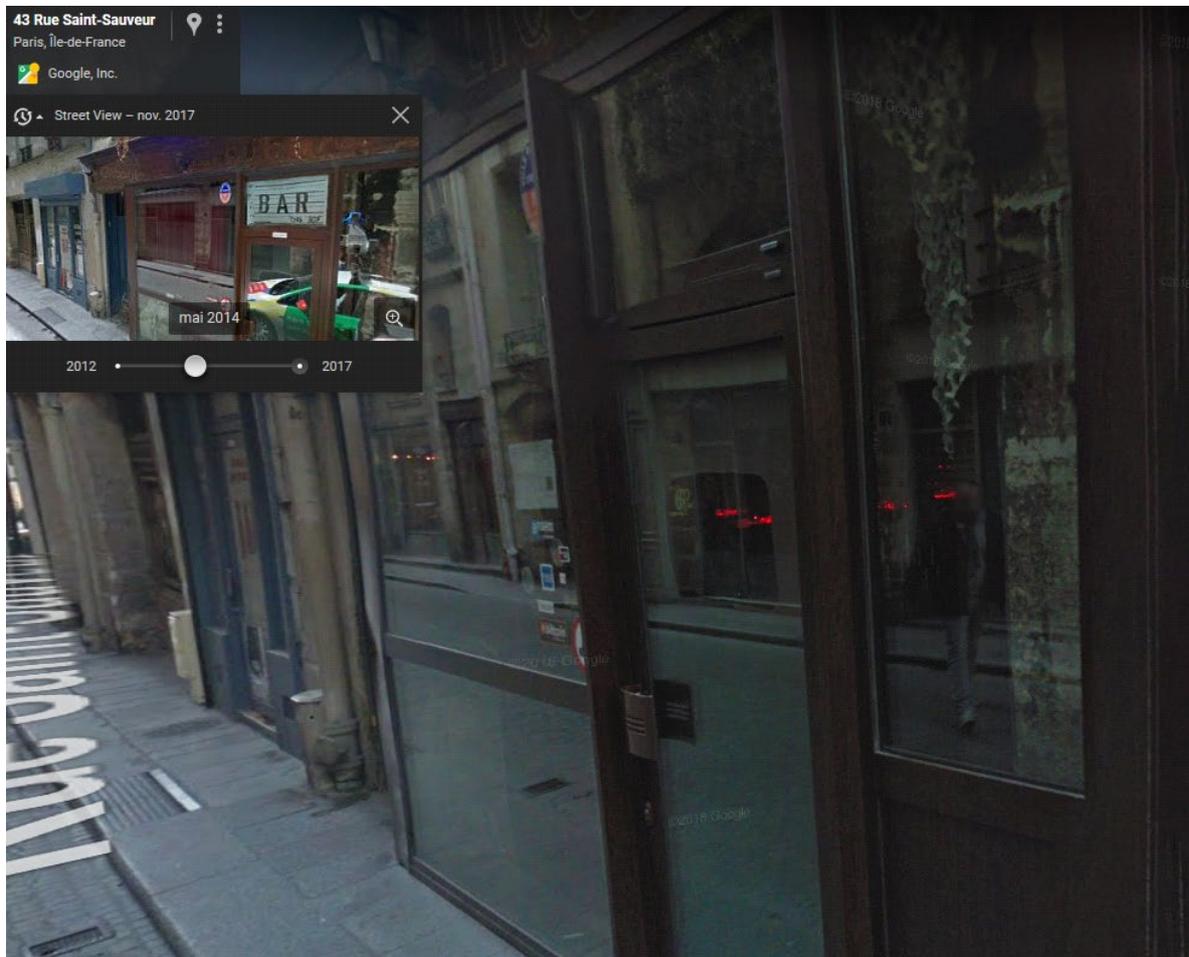

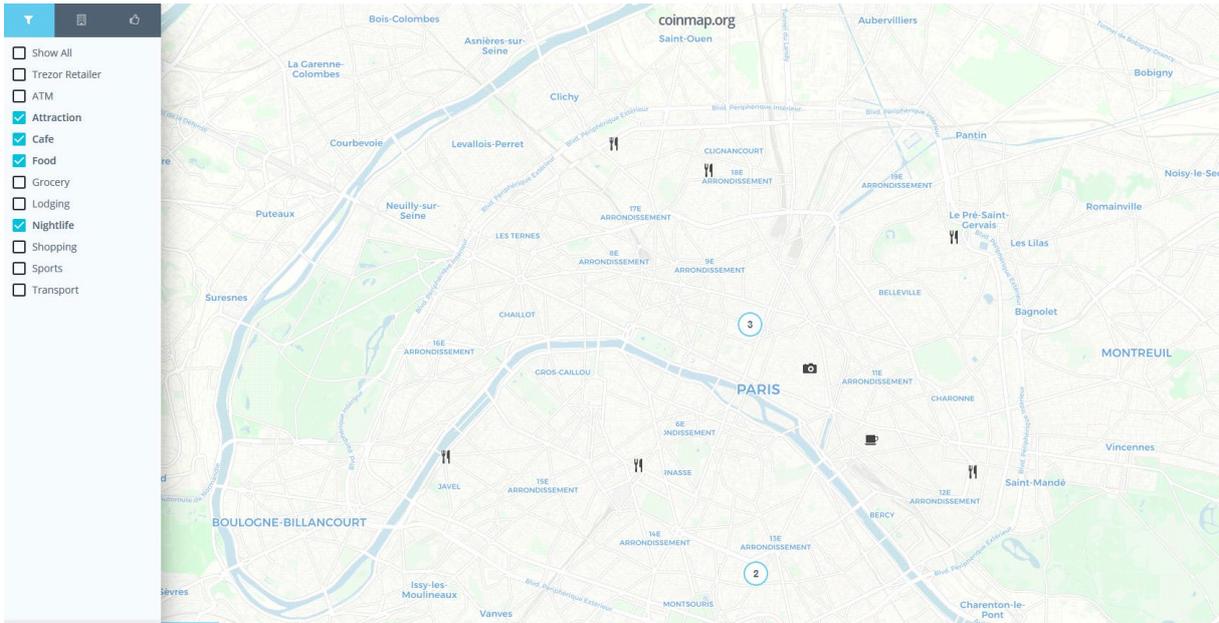

On June 17, Ian visits a bar to spend his Bitcoins.

Upon careful analysis of the photo, we notice a smoking ban sign written in French.

We also know that Advei lives in Paris. There is a good chance that this scoundrel Ian also lives in the city.

A cross-referenced search between Coinmap (with the right filters) and Google Street View allow us to conclude that the individual is at the "Sof's Bar" in Paris.

His Facebook profile with a nickname is easily found by studying Advei's friends in more detail.

At first glance, the individual seems to be managing the privacy of his Facebook posts well.

On the other hand, the result is quite different with some Facebook Graph Search requests.

Informatica

2010 – 2015

We notice in particular that Umberto seems young enough in the telematics industry to be the chief developer of SupremIoT, he who has seen a conversion from construction to IT.

His twitter shows us a passion for CR7 (Cristiano Ronaldo), as well as for the world of football in general.

The accounts he follows confirm Portuguese origins, a passion for crypto-actives as well as video games.

His Facebook profile is also full of photos of Cristiano Ronaldo and publicly indicates that he lives in Saint-Cloud.

A few requests allow us to guess that Umberto is nostalgic for his country.

Certainly, Mr. Ferreira has a passion for Portugal and football, but his interests do not seem to stop here, since this strange energetic person does not even try to hide his drug use (sending public messages, "likes" on explicit photos).

But after some further research, all of this is not very good.

Obviously, his former position at Bitconnect, an organization known to have been a Ponzi scheme, is a bad omen.

But I might as well tell you that this is nothing compared to his Twitter profile and subscriptions. This quote is the "pompom on the Garonne!"

It is easy to guess that Mr. Rochat is a swindler of Swiss nationality.

Benoît, by virtue of his duties, travels extensively, as he indicates in his tweets. But he also seems to make a great mockery of us.

Indeed, this one indicates leaving Russia to return to Switzerland, and has no shame in reusing the same photo as a previous tweet, while leaving the geolocation activated, geolocation that positions him in a bar in St. Petersburg.

Benoit Rochat @BenoitRochat · 10 juin

En route pour Madrid où je vais rencontrer les parlementaires espagnols très intéressés par notre projet. Et potentiellement masse de blé à se faire !

Enfin de retour. Un peu de repos dans mon pays natal sera bien mérité. – à Дом Сведенных Мостов

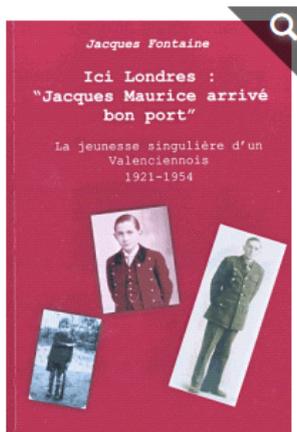

Benoit Rochat @BenoitRochat · 10 juin
Arrivé à bon port, comme dirait Jacques.

We can also assume that our Swiss target is a history fanatic, and more particularly of the Second World War with this reference to Jacques Fontaine.

Although we already have a wealth of information about our target, a Facebook profile would not be too much. A simple search on Facebook makes it relatively easy to distinguish the profile of the target, despite the homonyms.

On Facebook, there is generally very little information about Benoît.

On the other hand, the liked pages allow you to learn some useful information.

Energy Water Be S&F Tea Be S&F

On the other hand, the experience of this employee within "Be Fit and Strong" is striking.

Indeed, our dear friend has created a brand with her reputation as "InstaGirl", a sports influence woman...

In particular, Instagram has many publications showing her playing sports, preparing "healthy" meals, etc.

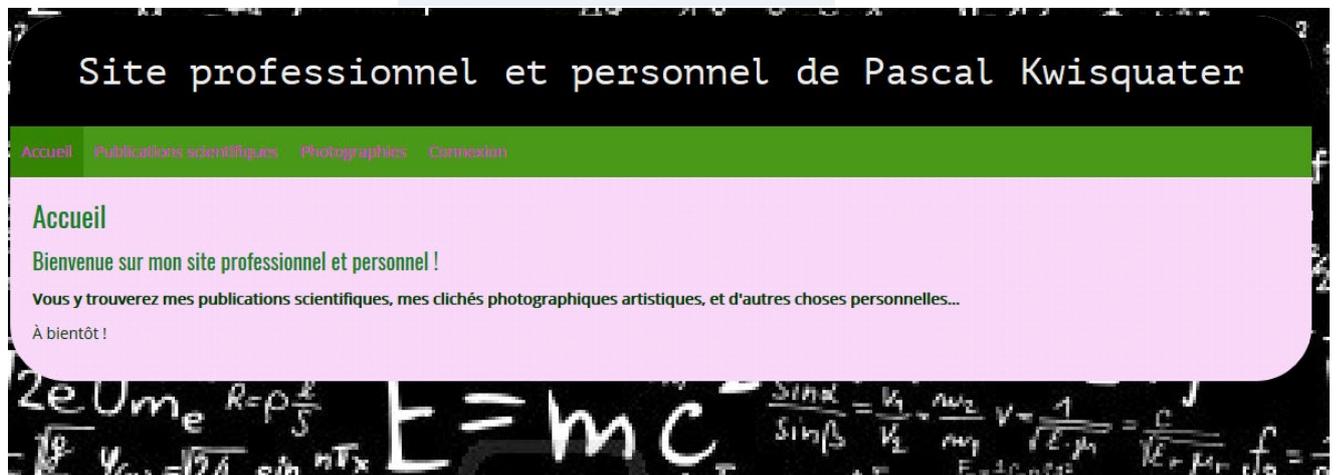

The different "stories" allow us to learn that she regularly works in France, is probably from Eindhoven, pays extreme attention to what she eats and perhaps has a connected bracelet.

But we also see that SupremIoT is a sponsor of the "Nuit du Hack". This can be distinguished by the published "story" that features a Dell computer screen, an Adobe Acrobat Reader PDF reader, VLC software and Antidote spelling correction software.

We can assume that Katrien is a narcissistic person, wishing at all costs to have a toned and muscular body.

6. Pascal KWISQUATER

Looking at the SupremIoT subscriber accounts, we find the account of a person presenting himself as SupremIoT's cryptographic consultant.

Pascal also has a personal website allowing him to present his work by exploiting all the potentialities of HTML 5.

This site allows you to retrieve a lot of information, including clues about the encrypted message previously published on Twitter. The encryption technique was later published.

pascal_kwi @KwiPascal · 1 juil.

Puisque nos clients nous ont convaincu que l'obscurité ne fait pas la sécurité, @SupremoT a l'honneur de dévoiler la fabuleuse fonction de cryptographie quantique SDGD ! Je serai ravi de partager vos avis sur le sujet ! Était-ce trop tiré par les cheveux ?

}
```

In the robot.txt, the "disallow" on a folder allows to find a "To-do list" where we learn that this mysterious character lives with his mother and uses Keepass.

We also learn, by browsing his site, that he likes smoothies with avocado. Critical information.

A photo library allows to realize that Pascal is a fan of the circle game, uses Tinder as well as What's app, but that on the other hand he doesn't master the metadata...

As for the LinkedIn profile, it turns out that it is a fake one created by a team of agents in order to destabilize and confuse the other teams, as mentioned above.

Pascal therefore did not have a LinkedIn profile.

7. Mei-Shi LIANHUA

Mei Shi is easily identifiable via LinkedIn, on which its route can be easily traced. She studied business studies in France, in Montpellier, and completed her last two years of studies in Shanghai. She stayed in China to work at the French Embassy, the ideal place to make high-placed contacts. She then returned 3 years later to France and used her Chinese contacts on behalf of SupremoT. Everything seems normal....

Her contact details are available on LinkedIn, giving us her date of birth, 12th of December, and her email address: meishi.lianhua163@gmail.com.

Her interests show her as a Chinese nationalist. In particular, she supports the Chinese People's Liberation Army....

Centres d'intérêt

After a picture of Northern Lights, we learn that she is on vacation in Shanghai to see her family, and she complains about the bad weather by posting a picture:

Chimay Lnh
13 juin · 🌐

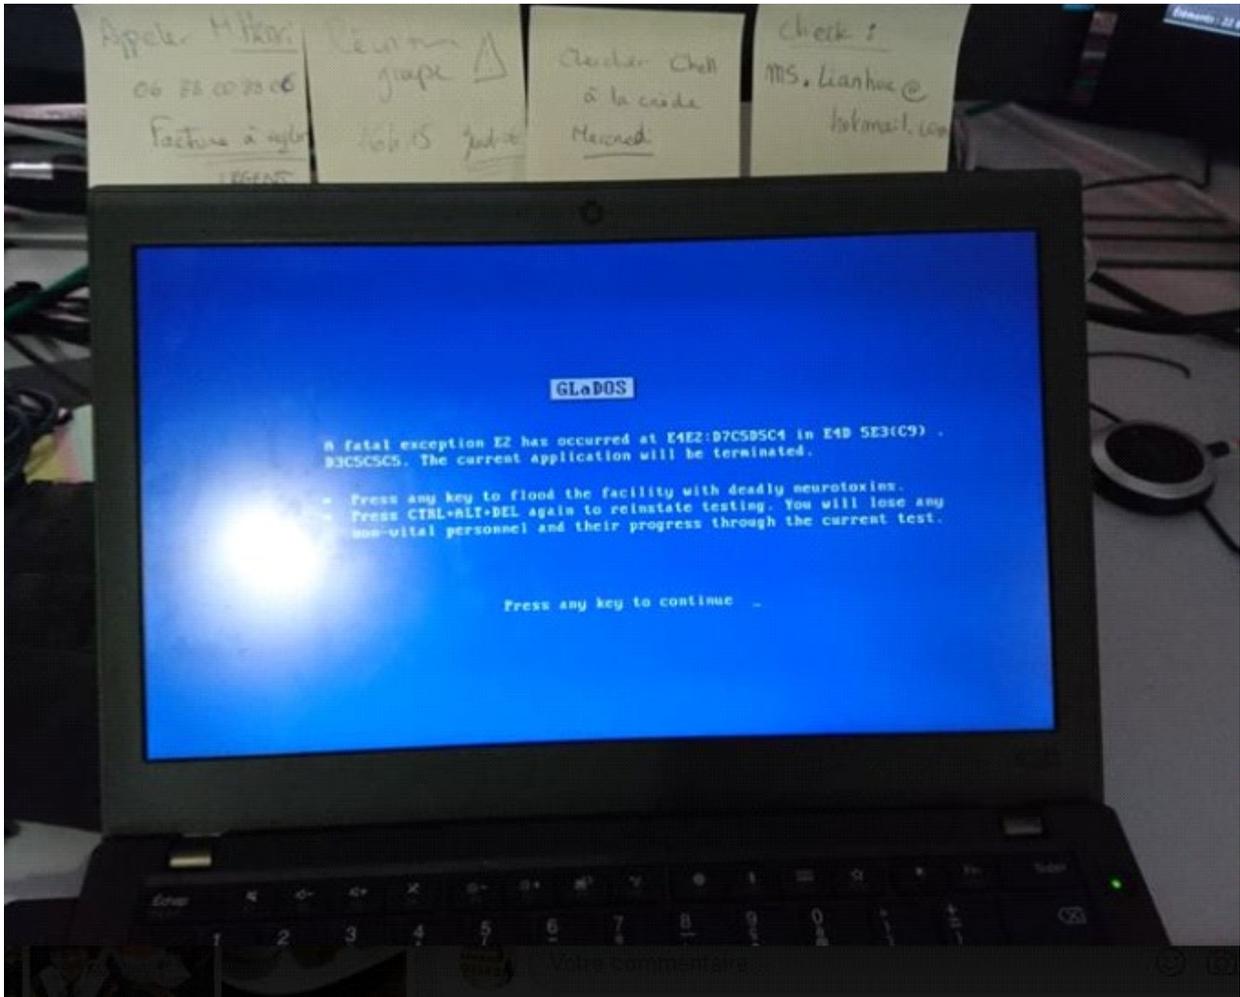

Taking some holidays to see family... bad weather 😞 Returning France end of June !

Finally, a photo of her BSOD gives us the following information:

- Mei Shi has a little girl in daycare: Chell

- An email address ms.lianhua@hotmail.com

(- And the famous number of Mr. HENRI who actually did not participate in the mission: D)

We now have access to his Twitter. Its subscriptions are targeted specifically at Chinese media, well-known antivirus vendors and government agencies. Strange.

As we go up the thread, we discover a "word-diesis" that comes back often, associated with obscure messages: #61398. This is similar to dispatches giving information about operations with coded names.

VenomBlackLotus @VenomBlackLotu1 · 12 juin

Delta stage : Ready for Aurora Ops #61398

We find again the photo of the building posted on Facebook about his holidays in Shanghai... But this time, his comment "A daywork like any other..." suggests that she's at work?!

VenomBlackLotus @VenomBlackLotu1 · 12 juin

A daywork like any other...

Traduire le Tweet

Let's take an interest in this image. By searching the Internet, we realize that this building is the headquarters of the 61398 unit, the Chinese cyber army.... Doesn't this figure remind you of anything?

L'unité 61398 (chinois : 61398部队) de l'Armée populaire de libération, basée à Shanghai, est chargée de conduire des opérations militaires dans le domaine des réseaux informatiques.

Dans un rapport publié le 18 février 2013, la société de sécurité informatique Mandiant accuse cette unité de l'armée chinoise d'être à l'origine depuis 2006 d'une vaste opération de cyber-espionnage principalement contre des entreprises et organisations anglo-saxonnes^{[1],[2]}. Le gouvernement Chinois a immédiatement nié être à l'origine de ces cyberattaques^[3].

We therefore have a strong suspicion that Mei Shi is leading a double life and work in reality for the APT1 hacker group.

Moreover, some tweets seem to locate her in Korea for a few days... These places seem to correspond to a hotel close to strategic political establishments in Pyongyang... Is Mei Shi on a political trip?

The image shows a Google Maps interface centered on Pyongyang, North Korea. A pop-up window identifies the 'Embassy of China' in Pyongyang. To the right, a location history table lists three entries. Below the table, 'Current Location Details' are shown, including the date, location, and context of the most recent location.

Date	Location

From: twitter
Context: Almost feel like home <https://t.co/McLalJA5pl>

She will return to China on June 23rd, where her tweet locates her at Pyongyang Airport. She will write on Advei's Facebook wall to announce her return to France on the 26th, giving an indication of her flight (only one team of agents found the flight number!).

To retrieve this information, all you had to do was be a friend on Facebook with Advei (not so difficult to make an attractive profile for him...) and search for flights from Shanghai to Paris.

Chimay Lnh ▸ Advei Moneymaker

June 26 · 🧑

Hey Advei Moneymaker, I'm flying back to Paris ! Ready and fresh for Saturday's event 😊 — 🛫 traveling to Paris from Aéroport international de Shanghai-Pudong.

You, Monique Ballet and Umberto Ferreira

Advei Moneymaker Good news, we have a huge lot of business inquiries and they want some technical details on the solution, glad you're back soon !

Like · Reply · 10w

Thanks to the photo posted on Mei Shi's Facebook, we get an email address. From this address, search engines refer us to database leak Pastebin links on which it is referenced with a password...

It is then possible to access an Outlook account... (unfortunately, despite the instructions, the inevitable happened and some teams had fun deleting messages: fortunately Mei Shi was watching...). It was also possible to obtain the "pst" of the mailbox.

We then notice exchanges with several correspondents, including a certain "U.G." who came back regularly (if you read the Mandiant report, it must have been Ugly Gorilla: p).

These exchanges dispel doubts that Mei Shi works for cybercriminal entities, most likely APT1. We learn that some operations have taken place and others are to come. Payloads are most likely exchanged via another channel (the "packages" it seems to refer to) in some emails. When searching for the names of operations, it is easy to see that they are usually massive attacks via state malware (attribution!).

It is also through her Outlook account that we can find Ian Kudryashov's email address, in an email from her that she will send to her APT1 teammates. She told them that the SupremIOT team will soon release a revolutionary algorithm and that it is beginning to gain the trust of its team.

A few days before June 30, she will forward an email from Ian, asking her to make an appointment with her favorite masseuse, who is none other than an APT1 member infiltrated to extract information during her "relaxing" moments with Ian.

IV. Approach methods

After collecting all this information, it was possible to establish an almost complete psychological profile for each target, and methods of approach and/or collection of personalized information.

We will not detail here the best attacks carried out by our agents, who will surely be part of a DLC. In addition, the scenarios described below are only suggestions; you can, of course, let your imagination run wild. There are many possible approaches!

Attacks can be carried out by vishing, phishing, Telegram, LinkedIn,.....

It is recommended to use methods such as MICE or SANSOUCIS, for greater efficiency.

1. Advei

One day, women will be his ruin... But for the time being, the central does not have the necessary means to carry out a LOVEINT or honey trap action. On the other hand, it is possible to approach him through its pronounced taste for spirits, music or its love of the country, which are as much a way of gathering information or having him carry out actions.

2. Ian

Although Ian also likes women, he is not, until proven otherwise, married. On the other hand, after having read about the places of pleasure he frequents, we can very well imagine an IRL approach by chance by talking about subjects that may interest him such as mangas, anime, chess ...

Of course, a thought about a computer attack can be interesting in case of 0-day revelations on his Mac.

3. Umberto

Umberto doesn't seem very comfortable in the field of development and cryptocurrencies, as we have seen with the memos we see in the organization's presentation video, but also thanks to the event allowing him to teach a developed intelligent contract in just four hours. His recent conversion of the construction world is in line with this hypothesis.

An invitation to an event where Ricard and football are present can be a guarantee of success to approach it. An event organized around the Portuguese community can also be interesting, knowing the nostalgia he has for its country.

Finally, usurping the identity of the gym he frequents to offer him additional services can be a good way to gather information.

4. Benoît

Scamming the scammer. What can we offer him, apart from promising him an exclusive partnership with the world's greatest?

It should be noted, however, that phishing attacks usurping his bank or his preferred exchange platform can be effective for a sales representative, if he does not know too much about IT and has the easy click.

Let's not forget the fact that Benoît seems to be a mythomaniac (cf. the use of the 2 aircraft photos, the geolocation errors...) and wants to put himself forward by regularly tweeting about his work while his collaborators do not reveal their working days so much.

Maybe he talks easily about things he should keep secret in order to make himself interesting, especially to women (remember that our target follows the Facebook page of Meetic Switzerland.) This is a possibility to study in more detail.

5. Katrien

Hey, go ahead, I do squats, I eat quinoa, I publish stories all the time,...

Katrien is considered to be the millennial social network addict and proud of her appearance. This probably hides a lack of self-confidence.

An approach via the Instagram social network seems the easiest if you have a lot of followers and you are handsome.

On the other hand, an approach via LinkedIn does not seem uninteresting either if one shows interest in it and its brand. It should also be remembered that she is an intern at SupremIoT and that her lack of experience can lead her to inadvertently reveal the organization's secrets.

6. Pascal

Pascal has all the characteristics of a nice guy. Unfortunately, he also has the profile of an opportunist who does not know much about cryptography, but is willing and passionate about his job.

On the other hand, being a little clumsy, his posting of an ad with the same nickname as his Twitter account can turn against him. Indeed, we do not know if Pascal's mother, although sharing her home, knows her son's sexual preferences.

If you want to take a less aggressive approach, there is nothing to stop you from sending an exclusive invitation

and any fees paid to visit an avocado smoothies manufacturing company.

7. Mei-Shi

What can we say about this profile, so complex and dangerous is it?

To attack this type of person, it is more than recommended to use all the technical means at your disposal to guarantee your anonymity and not to hurt the target, unless you want to be in the line of fire of certain government agencies with proven methods.

Discretion is required. To do this, you can respond to the Raspberry Pi sales proposal, talk about the Magic card game or even talk about your desire to complete the same curriculum as Mei-Shi while having an appetite for China.

If, however, you feel like playing with fire, there is nothing to stop you from trying to destabilize the target by talking about her daughter or her activities within the state services.

V. Tracking and interaction

As noted during the OSINT phase, SupremIoT was present at the Nuit du Hack XVI as a sponsor and therefore had a stand.

Agents,

La suite de votre mission va consister en une phase de filature qui a déjà été évoquée dans l'ordre de mission #2. Voici des précisions :

Vous ne serez pas seuls durant votre filature : deux agences concurrentes seront sur les traces des employés de SupremIoT en même temps que vous. Vous êtes autorisé à collecter des éléments d'informations sur ces agents.

Vous avez rendez-vous à **14h30** au stand SupremIoT. Vos deux cibles sont le CEO et le responsable commercial. Ils partiront de ce point pour rejoindre leurs rendez-vous. Répartissez vos agents sur les deux cibles. Suivez-les, prenez-les en photos sans vous faire repérer. Récupérez les documents qui pourraient servir.

Vos objectifs :

Pour le CEO :

Après l'échange, vous aurez 5 minutes pour faire pression de la manière qui vous semblera la plus adaptée dans le but de récupérer tout ou partie de l'investissement de nos clients.

Pour le responsable commercial :

Un échange de document doit avoir lieu via boîte morte. Il est impératif que vous ayez connaissance du message, mais que vous n'altériez pas la livraison. Nous soupçonnons M. Rochat de détourner une partie des fonds de l'ICO. Vous aurez 5 minutes pour récupérer des aveux de sa part concernant le détournement de fonds qu'il réalise. Obtenez les indices qui le prouvent.

À noter :

Dans le cadre de la coopération internationale entre sociétés d'investigations spécialisées, merci de respecter ces délais de 5 minutes et de laisser les preuves à leur place pour permettre aux autres agences de récupérer les données. Vous n'avez pas l'autorisation d'interagir avec les cibles si elles sont déjà en contact avec une autre agence.

Pendant tout le temps de la filature, des membres de l'équipe SupremIoT seront présents sur le stand : n'hésitez pas à interagir avec eux.

Nous attendons votre rapport pour **17h30 CEST** dernier délais.

Bon courage,

Agent Martin

Pas de N° de mobile.

La crypto pour les nuls

Qu'est-ce qu'un smart contract ?

par AdminDev | 14 Jun, 2018 | Guide du débutant | 0 commentaires

Les smart contracts (ou contrats intelligents) sont également appelés contrats auto-exécutives, contrats digitaux ou encore contrats Blockchain. Comprendre le fonctionnement des smart contracts est essentiel pour appréhender les apports de la technologie de chaîne de blocs aux différents pans de l'économie réelle.

Si sa mise en oeuvre est récente, l'idée est loin d'être nouvelle. Elle date de 1994, lorsque Nick Szabo, cryptographe de génie, soumet pour la première fois la possibilité d'enregistrer des contrats sous la forme d'un code informatique qui s'exécute automatiquement lorsque certaines conditions seraient remplies. L'automatisation des transactions et la concrétisation de l'idée de smart contracts se réalise pour la première fois via la technologie de chaîne de blocs grâce au réseau Ethereum, créé en 2013 par Vitalik Buterin.

Une nouvelle approche de l'accord

British Virgin Islands - Overview

Early: North America - Caribbean - British Virgin Islands

The British Virgin Islands are a self-governing British overseas territory situated in the Caribbean, just to the east of the US Virgin Islands.

The BVI's, as they are called, are a popular travel destination for sailors, fishermen, nature lovers, and other independent travellers, ideal not just for the most cautious, but also among the dozens of very, mostly unvisited, islands in a great way along the coast of the Caribbean islands.

Understand

Landscape

The British Virgin Islands comprise six islands and keys, with more than 42 of them being uninhabited islands. The islands fall into two types: the majority are steep volcanic islands (including the main island, Tortola and Virgin Gorda), and a small number of relatively flat coral atoll islands (Anegada and Sandy Spots). In fact, Anegada and Sandy Spots are 'discovered' because its elevation is so low that many people miss it altogether and they are close to 0. The highest point is Sage Mountain on Tortola.

Climate

With a tropical climate tempered by easterly trade winds, it has very low humidity and little snowfall. Temperature variation, the weather is unpredictable, but the low humidity is rather enjoyable. In the low season, there are some hurricanes, although in recent years they have had little consequent damage beyond some flooding.

History

The islands were first settled by the Dutch in 1648 before being annexed in 1672 by the British.

Quick Facts	
Capital	Road Town
Governor	Self-governing British Overseas Territory
Current area	16 640 km ² (6 425 sq mi)

Memo belonging to Pascal

Tattoo of a lotus on the forearm to identify who Mei-Shi is

It was also necessary to test his pickpocketing skills in order to steal a Bitcoin paper wallet protruding from Advei's pockets as he walked.

It should be noted that some agents collected SupremoIoT business cards from the stand.

It should be noted that these cards were not produced by the SupremoIoT teams. Another attempt at destabilization, probably carried out by a powerful foreign state. These cards led to a false clue, Zataz having nothing to do with it.

But the main purpose of the mission was to follow the Advei and Benoît targets.

1. Benoît's tracking

Benoît's surveillance was mainly used to notice that he used a dead letterbox.

In fact, after a long journey (probably to try to lose potential pursuers), he stops and writes on a piece of paper that he throws in the garbage. The message on the card states that he managed to misappropriate the money and that it is in a safe.

We have proof right here that Benoît fooled the entire SupremIoT team.

After this surveillance, Benoît found himself alone, which was the ideal time to talk to him in order to record a confession of the misappropriation of money in order to initiate legal proceedings against him later.

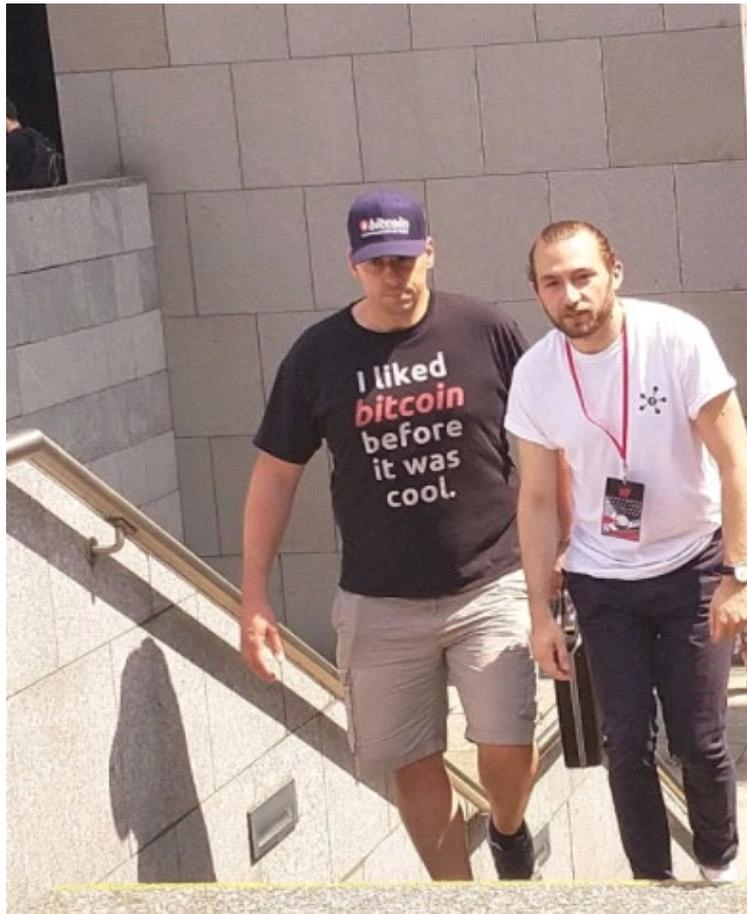

Benoît spilling the beans

2. Advei's tracking

The central knows that Advei must meet a person laundering his crypto active in euros, and more if affinities....

A surveillance of the CEO shows that he meets a Russian man with a briefcase handcuffed to his wrist.

Completion of the transaction

As soon as the launderer left, the agents had to meet Advei in order to convince him by all means (except violence) to give them a sum of money to reimburse the unfortunate customers.

Attachment containing Bitcoin wallets, €500 bills and cocaine bags.

VI. The Mei-Shi case

While almost all the guests at the event are busy, some services are on the warpath.

The Chinese secret service agent Mei-Shi, who sells her Raspberry Pi with the KylinOS operating system, is of great interest to the headquarters, but not only that....

Indeed, Mei-Shi bosses required her to return the computer to an agent of their services present on site. The teams' objective is to recover the electronic device at all costs.

Bonjour,

Pour l'ultime mission, vous devez intercepter le Raspberry détenu par Mei Shi (agent chinois en train de réaliser l'opération Black Panda !)
Le Raspberry doit surement détenir des informations de la plus haute importance !
Les agents SIS vous donnent rendez-vous à **19H15** au stand SupremloT pour vous fournir plus d'informations ainsi que du matériel.
Vous devrez suivre l'individu.

Une seule personne doit aller rencontrer Mei Shi, se faire passer pour un agent allié de Mei Shi et lui demander de fournir le Raspberry comme convenu.
Le reste de votre équipe devra suivre l'opération à distance.

Une division de soutien vous surveille.
En cas de problèmes, elle interviendra pour vous soutenir

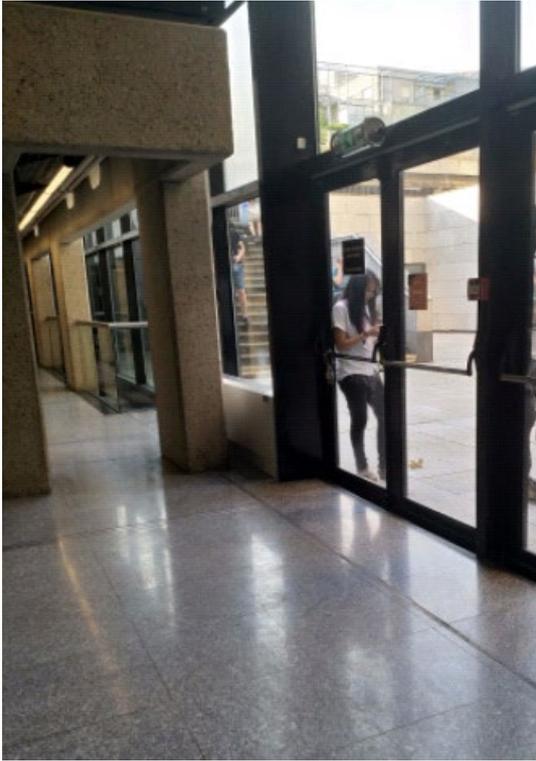

Les vidéos et fichiers son de cette partie sont essentielles.

Vous ne devrez montrer aucun signe de résistance !

Bon courage,

Agent Dupont

Only one person on the team will be allowed to meet with Mei-Shi in order to impersonate the legitimate agent who is to pick up the package. The rest of the team will look after the safety of the recaperator and help at the tracking to see where Mei-Shi is waiting for her appointment.

The target waiting for her appointment

Exchange in progress

Once the exchange was completed, Mei-Shi left, but the agent was intercepted by French counterintelligence. They would like to know more about the Raspberry Pi, but especially about the person who recovered this device.

The agent is taken to a separate room and is handcuffed while waiting for French agents to come and question him. He has a metal bar from a wiper blade and a hairpin at his side so that he can free himself before someone enters the room where he is locked up.

The room is protected by RFID access. The other agents of the team whose unfortunate teammate has been intercepted are responsible for stopping the guards in front of the door or during their departures in order to copy from their pockets the badge that will allow them to reach their unfortunate colleague.

Agent paying a French counterintelligence official for a beer to discreetly copy the RFID badge in his pocket

Once gathered in the room, the team's objective, within a given time frame, is to:

- Login to a Bitcoin miner and change the Bitcoin reception address;
- Hook a box containing the safe and documents inside;
- Hook the briefcase to get all the money, Bitcoin wallets and cocaine;
- Dumpster diving;
- Minimize a part of the Bitcoin block by hand.

```
pi@antminerS9: ~/cpuminer-multi
# ./cpuminer-multi --help
-D, --debug          enable debug output
-P, --protocol-dump  verbose dump of protocol-level activities
  --hide-diff        Hide submitted block and net difficulty
-S, --syslog         use system log for output messages
-B, --background    run the miner in the background
  --benchmark        run in offline benchmark mode
  --cputest          debug hashes from cpu algorithms
  --cpu-affinity     set process affinity to cpu core(s), mask 0x3 for cores
0 and 1
  --cpu-priority     set process priority (default: 0 idle, 2 normal to 5 high)
-hest)
-b, --api-bind       IP/Port for the miner API (default: 127.0.0.1:4048)
  --api-remote       Allow remote control
  --max-temp=N       Only mine if cpu temp is less than specified value (linux)
(x)
  --max-rate=N[KMG] Only mine if net hashrate is less than specified value
  --max-diff=N       Only mine if net difficulty is less than specified value
-C, --config=FILE   load a JSON-format configuration file
-V, --version        display version information and exit
-h, --help          display this help text and exit
pi@antminerS9:~/cpuminer-multi $ ./cpuminer --coinbase-addr=16t2aB4TVijtCkppCa34

```

And that's how the mission ends!

VII. And to conclude...

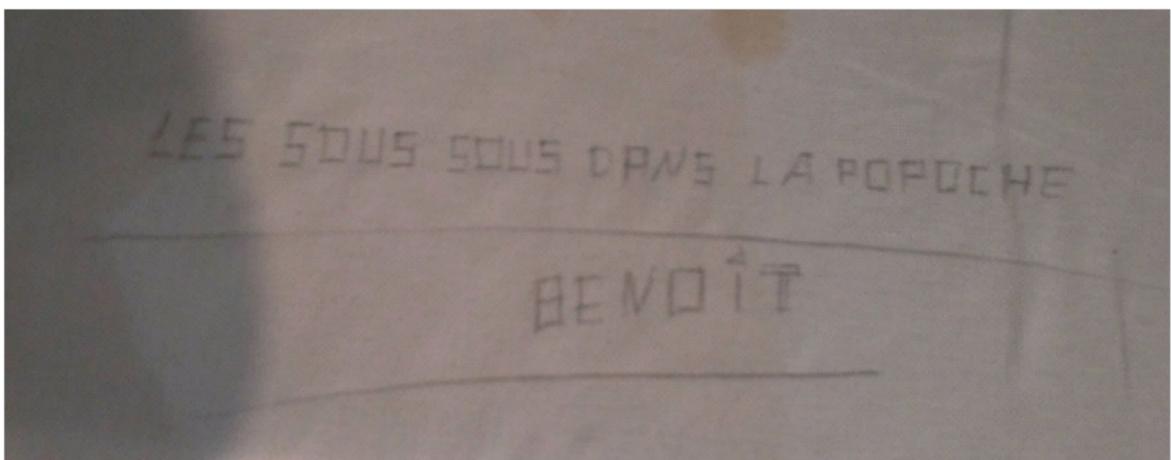

Although the CEO leaves empty-handed, some SupremoT employees continue to enjoy some of the profits scammed from the countless investors, on social networks and on the stand table.

SupremloT @SupremloT · 30 juin

Toute l'équipe de #SupremloT vous remercie pour votre accueil à la #NDH16.
#FarineFrancine
